

Camp Outcomes 2010

During 2009 there were 648 individuals who attended camp. Ages ranged from five to 80 years old. The greatest numbers of participants were in the range of 11 to 20 years old; 365 children and 283 adults attended Camp Courage and Courage North. Thirty percent of camp participants were female and 70% were male.

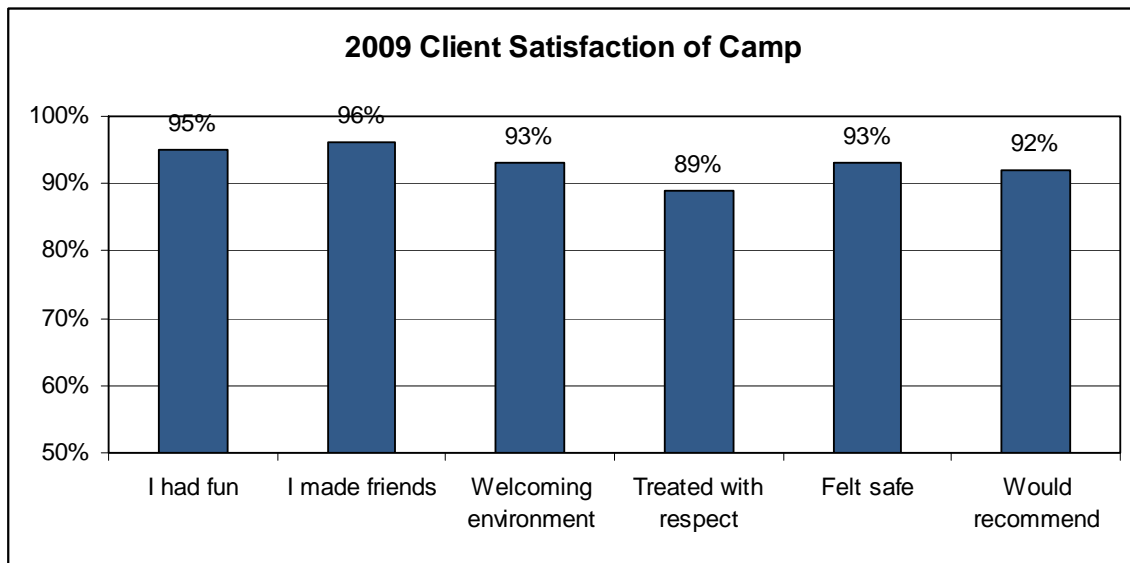

Diagnosis of Participants

Of those attending camp the largest number of participants had a diagnosis of cerebral palsy at 24%. Thirteen percent had a spinal cord injury, 11% had brain injuries or stroke, 11% had autism spectrum disorders, 4% had speech deficits, 4% had bone or joint pain, 3% were visually impaired, 9% had neurological disorders, 1% was hard of hearing, and 20% had other diagnoses.

2009 Client Satisfaction of Camp

According to satisfaction surveys, almost 90% or more campers indicated they were satisfied or strongly satisfied with the camp experience being fun, meeting friends, encountering a welcoming environment, feeling respected and safe. 92% said they would recommend Courage Camps to others. As one camper expressed, "All my medical needs were met. I was truly welcomed by friendly and experienced staff."

Independence was encouraged and helped build my confidence. I made more friends than possible anywhere else. It's a wonderful experience."

Children

Skills were measured with children attending camp in the areas of the making friends, being independent and in their perception of competence. The majority of children felt that they had built skills in these areas.
